(57) Abstract: A program recording/reproducing apparatus capable of easily recording/reproducing programs that meet the preferences of all of a plurality of viewers. A recording/reproducing apparatus (100) acquires program recommendation information from a server apparatus (300), designates internally stored program recommendation information, produces, based on these two types of program recommendation information, two search formulas, and combines the produced search formulas to produce a single search formula. The apparatus (100) then produces, from EPG data extracted from received broadcast waves, preselected-program information indicative of programs that meet the conditions indicated by the produced search formula. The apparatus (100) also produces, based on the produced preselected-program information, and displays a recorded-program table, and further accepts a selection of a program from the recorded-program table in response to a user's command, and reads and reproduces the program the selection of which has been accepted.
